

# The FARM INCOME SITUATION

FIS-171

ALBERT R. MANN  
LIBRARY

NOV 26 1958

Farmers' realized net income is showing its sharpest increase in 15 years. It was at an annual rate of 13.1 billion dollars in the first three quarters of 1958, up about a fifth from the corresponding period in 1957. An increase in realized gross income so far this year is only partly offset by higher production expenses.

Both realized gross and realized

net income increased from 1950 to 1951, but then declined every year until 1956. They dropped off again in 1957. Realized gross income jumped 10 percent this year to a new record high of 37.6 billion dollars. Production expenses also rose sharply in 1951, and again in 1952. They declined some in 1953, but have since climbed steadily.

## FARM INCOME IN 1958 AND OUTLOOK FOR 1959

Farm income is up sharply this year, but may drop off some in 1959. A 10-percent increase in realized gross farm income this year, with production expenses up only 5 percent, is bringing a 20-percent increase in farmers' realized net income.

The decline expected next year is likely to be much smaller than the increase this year. Prices of farm products may show some decline, mostly because of lower prices for hogs. But with marketings probably increasing further, total cash receipts may be close to this year's near-record level. Elimination of Acreage Reserve payments and some further increase in production expenses are expected to bring a reduction of from 5 to 10 percent in realized net income. On the other hand, the upward trend in income of farm people from nonfarm sources, interrupted by the recession this year, will likely be resumed in 1959.

Farmers' realized net income was at an annual rate of 13.1 billion dollars in the first three quarters of 1958, compared with 10.8 billion for the same period last year. (See table 1.) Realized net income for the year as a whole is tentatively estimated at around 13 billion dollars. The increase of a fifth from last year is the largest since 1943.

The 10-percent increase in farmers' realized gross income this year reflects substantially higher cash receipts from marketings, a slight rise in Soil Bank payments, and some further increase in the rental value of farm dwellings. Only the value of home-consumed farm products failed to show any increase, as higher average prices were offset by a further decline in quantities consumed, primarily a reflection of declining numbers of farm-operator families.

Cash receipts from farm marketings this year are expected to total approximately 33 billion dollars, including 14.2 billion from crops and 18.8 billion from livestock and livestock products. This is about the same as the previous high reached in 1951. Livestock receipts are 8 percent

larger than last year, while crop receipts are up 14 percent.

Cash receipts from crops are substantially higher in the case of wheat (35%), potatoes (30%), oranges (25%), soybeans (20%), and cotton (20%). Cash receipts from sorghum grain this year are almost twice as large as last year. Most of the livestock items show increases in cash receipts this year. Dairy products, however, show a slight decline. Cash receipts from cattle and calves are up a sixth to approximately 7 billion dollars in 1958. Hogs are up about 5 percent from last year's total of 3.1 billion dollars. Cash receipts from chickens, including broilers, are 15 percent higher than last year, eggs are up 7 percent, and turkeys about 4 percent.

In 1959, cash receipts from farm marketings may be well maintained. Somewhat lower receipts are in prospect for hogs, wheat, and sorghum grain. But cash receipts from cotton are likely to be larger if acreage is expanded appreciably, as permitted under the Agricultural Act of 1958.

Total Government payments this year are estimated at 1.1 billion dollars, including nearly 700 million dollars in Acreage Reserve payments under the Soil Bank program. All Acreage Reserve payments will probably be made before January 1, 1959. Their elimination next year will be partly offset by an expansion of the Conservation Reserve program and by some increase in wool incentive payments.

Total farm production expenses are up this year from  $23\frac{1}{2}$  billion dollars in 1957 to an annual rate of  $24\frac{1}{2}$  billion in the first 9 months of 1958. The estimate for 1958 as a whole may be even higher as cost rates continue to rise. Prices paid by farmers for production items so far this year have averaged 4 percent higher than last year. The largest price increases have been for feeder livestock, up about 25 percent, but prices have also averaged higher than last year for farm supplies, machinery, and motor vehicles. Prices of feed and seed have declined slightly, but there has been a substantial increase in the quantity of feed purchased. Farm property taxes and interest payments are each up about 7 percent, wage rates about 2 percent. Further prospective increases in interest, taxes, and wages next year indicate some increase in total production expenses in 1959.

#### CURRENT ESTIMATES

##### Volume of marketings and home consumption in 1958

The physical volume of farm marketings in 1958 is setting a new record high, 7 percent above last year and 2 percent above the previous record set in 1956. Based on conditions as of November 1, marketings this year are expected to total 123 percent of the 1947-49 annual average volume as compared with 116 percent for 1957 and 121 percent for 1956. (See table 2 on page 7.)

The increase in total marketings this year is due entirely to a 20-percent increase for crops, as marketings of livestock and livestock products are slightly smaller than last year. The volume of crop marketings in the current

calendar year is 9 percent larger than the previous high in 1956. Marketings of food grains, feed crops, and oil crops are all at record levels this year, and cotton marketings are up some from last year's low level. Meat animals account for most of the drop in livestock marketings. Sales of poultry and eggs are setting a new record high for the third year in a row.

Marketings of farm products used primarily for food are up 2 percent from 1957. Nonfood marketings are up 20 percent. The volume of home consumption is continuing its long-term decline.

#### Cash receipts in September and October

Farmers received 3.3 billion dollars from marketings in September, 12 percent above receipts in September 1957. (See table 3.) Crop receipts were 13 percent larger than a year ago, and livestock receipts were up 11 percent.

The tentative estimate for total cash receipts in October is 3.9 billion dollars, 2.0 billion from crops and 1.9 billion from livestock and products. The total is a sixth larger than in October 1957, reflecting in part earlier marketings of cotton from a larger crop this year.

#### OUTLOOK CHARTS ON FARM INCOME

The 1959 issue of Agricultural Outlook Charts includes three charts relating to farm income. One is reproduced on the cover of this report, the other two are on page 6. The cover chart includes preliminary estimates for 1958 based on seasonally adjusted data for the first three quarters. The top chart on page 6, showing realized net income as a percentage of realized gross income, was derived from the same data as the cover chart, so it also includes a 1958 estimate based on the first three quarters. Estimates for the lower chart on page 6, comparing farm and nonfarm per capita incomes, which include for farm people income from nonfarm sources as well as from farming, are available only through 1957 at this time.

During the five years 1943-47, farmers retained as net income approximately half of their gross income. However, the percentage of net to gross declined almost continuously during the next 10 years, as prices of farm products declined and prices and quantities of purchased inputs both increased. The 1957 percentage (31.6) of net to gross income was the lowest since 1932. With a 10-percent increase in realized gross income this year, the percentage of net to gross is back to the 1956 level of 35 percent, even though expenses also increased nearly 5 percent.

Income per person on farms from all sources was \$967 in 1957. Non-farm sources have been increasingly important in the total income of farm people. Although income from nonfarm sources has leveled off some this year, due to the brief economic recession, farm income itself is probably up enough to bring per capita income of farm people from all sources above the thousand

dollar mark for the first time in history. Per capita income of the nonfarm population is changing very little this year, and may even show a slight decline.
